

EGGIE UP YOUR DIET: EASY TIPS TO INCREASE VEGETABLE INTAKE

Currently, the average American consumes approximately 1 cup of vegetables per day,¹ falling well short of the 2005 Dietary Guidelines that recommend a minimum of 2.5 cups for adults. Convenience, price, and fear of spoilage are at the top when consumers list reasons for not eating more vegetables. You can help consumers by suggesting ways to make preparing and enjoying vegetables more realistic. Use these fun and easy tips to motivate consumers to **veggie up their diets!**

Be Prepared! Carving out time for prep work on the weekend can go a long way during the week!

- After grocery shopping, wash, chop, and wrap up vegetables to give yourself a head start
- Double the vegetables you prepare for dinner and use the leftovers in meals the next day
- For breakfast, roll scrambled eggs, salsa and leftover vegetables like potatoes and broccoli into a tortilla
- Stuff leftover asparagus or peas with sliced turkey and cheese into a pita
- Roast for flavor. Toss cubed potatoes, peppers, onions and your favorite spices with olive oil and roast at 400°F in the oven for an hour. Make a big batch for use in multiple dishes.

Did you laugh when you heard “carving out time for prep work?” If so, then these quick to the table tips are for you.

- Stock your pantry and freezer with frozen and canned vegetables for quick additions to meals
- Microwave “steam-in-the-bag” vegetables as a side to boost the nutrition of take-out
- Make a large batch of soup using chicken stock, canned beans, and frozen produce. Then freeze individual portions for weekday lunches. Just pull one out and reheat.
- Store your “ready to eat” vegetables like baby carrots at eye-level in the refrigerator making it easy to remember them for snacking or to simply throw into pastas, casseroles, or stir-fry
- Bring a Green Giant – Just for ONE![™] single serving of vegetables as a fun and different side for lunch

Increasing vegetable consumption is especially important for children as 96% are not meeting their recommended levels of 1 cup for toddlers and up to 3 cups for teens. Despite the fact that over a quarter of parents believe it is more likely that their child will become president than eat the recommended servings of vegetables², it is possible!

Make it a game! Kids are more likely to eat vegetables they have helped to purchase or prepare.

- Have your child pick a vegetable at the grocery store they've never tried and prepare it together for dinner
- Create a tally and see who in the family can eat the most vegetables each week then choose a fun reward like a new book or trip to the movies
- Make vegetables fun! Play with and learn about vegetables in your own kitchen or on websites like www.MightyGiants.com.
- Start early! Babies and toddlers can practice fine motor skills with pea sized veggies like, canned beans, frozen peas, or fresh steamed broccoli pieces.

Sneaking it in really works!

- Shred, cook, and/or puree vegetables like carrots or cauliflower to add into pasta sauce or use to thicken soups
- Create sandwich spreads by adding finely diced veggies like red peppers or peas to mayonnaise
- Mix their favorite vegetable in with something you'd like them to try, like adding broccoli to mashed potatoes

For those who are computer savvy...

- Not sure what to do with that last bit of asparagus? Find a recipe for specific vegetables in the recipe section at www.FruitsAndVeggiesMatter.gov.
- Visit www.EatBetterAmerica.com for recipe ideas, cooking techniques, and nutrition advice
- Check out www.MightyGiants.com for fun kid activities that encourage them to eat more vegetables, plus resources for parents
- Visit www.GreenGiant.com and click on "Stir-In Ideas" to help spice up your frozen vegetables
